One way to analyze acquisition strategy and estimate marketing costs is to calculate the Lifetime Value ("LTV") of a customer. Roughly defined, LTV is the projected revenue that a customer will generate during their lifetime. In this graphic we'll briefly cover how to calculate LTV and how to use LTV to help solidify your marketing budget. Special thanks to @avinash.

Case Study: Starbucks

Despite the shaky economy, Starbucks is opening new stores around the world. In 2012, Starbucks expects to open 600 new locations internationally, about 25 percent of which will be in China. It's no secret that Starbucks' acquisition strategy is closely scrutinized and routinely copied. Using rough sales figures from 2004, we're able to estimate the LTV of an average Starbucks customer. The sales data from Starbucks may not reflect current marketing trends, and is only provided to illustrate the steps necessary to calculate LTV.

Step 1: Average Your Variables

Step 2: Calculate Lifetime Value (LTV)

average customer lifespan (20 years), there's a chance that they could be losing money. **Breaking Down LTV Further**

the maximum acquisition cost of a new customer. Using our estimate (an average of several LTV equation results), Starbucks must spend less than \$14,099 to acquire new customers. If Starbucks spends more than \$14,099 per acquisition over the course of an

Step 2 in this graphic is intended to help you determine LTV as a total average (an average of all your customers). To do this, companies will typically average the data from randomly chosen customers (as shown in Step 1 above). Sometimes it's helpful to break down the

average further and perform separate LTV calculations for different kinds of customers. Try and segment your customer base by total purchases over a long time period, and it will help you determine the LTV of a "good" customer versus an "average" one. This type of

LTV WILL BE DIFFERENT FOR DIFFERENT KINDS OF CUSTOMERS

analysis will help you determine how much more you should pay in order to acquire a "good" customer. See chart below. \$2,000 INVESTING IN "GOOD" CUSTOMERS

Let's say that the LTV of an "average" customer is \$8,000, and the LTV of a "good" customer is \$10,000. By subtracting the two LTVs, you can see that you might expect to pay \$2,000 more to acquire "good" customers.

likely be more profitable as well.

Companies should be worried about the lasting impact of "buying cheap customers." How likely are these customers to buy another product, or hang around for a few years? Sometimes it pays to invest in "good" customers. "Good" customers might cost more to acquire, but they'll

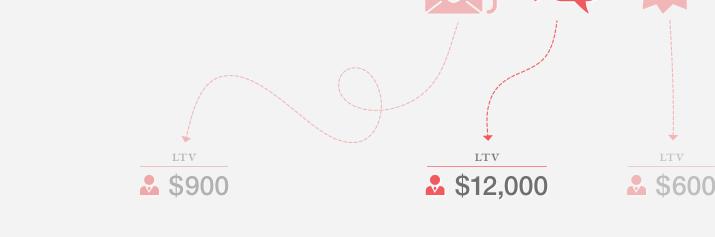

One of the most effective ways to boost LTV is to increase customer satisfaction. Research has found that a 5% increase in customer retention can increase profits by 25% to 95%. The same study found that it costs six to seven times more to gain a new customer than to keep an existing one.

CUSTOMER SATISFACTION AT STARBUCKS*

The success of Starbucks could be attributed to its high customer satisfaction rate (89%, 2002, see below). Survey software, such as KISSinsights, can help you determine (and improve) your customer satisfaction rate.
